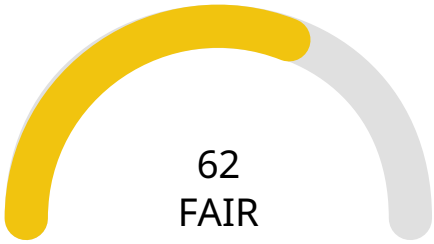
AMPX

Amprius Technologies, Inc. (NYSE)
As-of: 17-Oct-2026 | Latest Filing: Q2 2026 (10-Q) | Currency: USD

$7.71 [Mkt 17-Oct-26]

Market Cap: $1.13B [Mkt 17-Oct-26]

Attractiveness Score



Confidence: **Medium** (0 pillars excluded)

Pillar Breakdown

1. Operating Quality — 50

Pre-profit with no moat from earnings, but the technology is genuinely validated: 500 Wh/kg SiCore cells, NDAA-compliant supply, DoW funding, and paying customers. Gross margin hit 27% and the capital-light contract manufacturing model keeps balance sheet risk contained. Debt is negligible at $6.4M.

2. Recent Trend — 85

Revenue +153% (Q1) then +126% (Q2), guidance raised twice in a row, net margin improved from -42% to -9% in a year, and EBITDA breakeven is imminent. One of the cleanest inflection trajectories in coverage.

3. Forward Growth — 78

$24M European drone order, $100M+ multi-year Stark Future deal, Redwire Stalker Block 30 supply wins, and a $75M DoW OTA (mostly unfunded, tied to appropriations). The $140M FY26 guide is confirmed by orders, but 2027+ capacity depends on contract-manufacturing execution.

4. Valuation — 44

DCF base $5.12 implies 34% downside at $7.71. EV/Revenue TTM 14.7x is rich for a cash-burning battery maker, though NTM 6.5x reflects the growth. The $22 analyst mean target assumes the 2030 plan is fully funded and executed.

5. Catalysts & Risk — 55

Q3 earnings test H2 delivery, SiCore 500 commercial availability in Q4,

and DoW milestone payments are near-term positives. Against that: the bulk of the $75M grant is unfunded, short interest sits near 17-19%, insider selling of $1.27M last quarter, and a 2.35 beta with the stock 68% off its highs. Two-sided skew.

Investment Thesis

- **Inflection Is Real:** Revenue of $34M in Q2 [8-K guid], up 126% YoY, with the FY26 guide raised to at least $140M [8-K guid] for the second straight quarter. Net margin improved to -9.3% [10-Q Q2 2026] from -42% a year ago.
- **Orders Back the Story:** $24M European drone order, multi-year Stark Future deal over $100M, Redwire Stalker Block 30 supply, and a $75M DoW grant to build US drone-cell capacity [8-K]. Demand is confirmed, not hoped.
- **Price Ahead of Fundamentals:** At $7.71 [Mkt 17-Oct-26], the DCF base of $5.12 [Cons] implies 34% downside, and 14.7x TTM revenue is a steep price for a still-loss-making company. Growth deserves a premium; the current premium prices in the bull case.

Key Operating Metrics

METRIC	LATEST	YOY CHANGE	3Y TREND
Revenue (Q2 2026)	$34.0M [8-K guid]	+126% [8-K guid]	Up
Gross Margin (Q2 2026)	27% [8-K guid]	n/a [n/a]	Up
FY2026 Revenue Guide	$140M+ [8-K guid]	+95% vs 2025 [8-K guid]	Up
Net Margin (Q2 2026)	-9.3% [10-Q Q2 2026]	+33 pts [10-Q Q2 2026]	Up
Cash (Q2 2026)	$74.5M [10-Q Q2 2026]	+37% [10-Q Q2 2026]	Up
Adjusted EBITDA Guide (FY26)	$4M+ [8-K guid]	n/a [n/a]	Up
DoW Grant (Project acCELLerate)	up to $75M [8-K]	new [8-K]	Up

Historical Financial Trend

METRIC	2022	2023	2024	2025	TTM
Revenue	$4.2M [10-K]	$8.8M [10-K]	$23.6M [10-K]	$71.9M [10-K]	$109.2M [Mkt 17-Oct-26]
Gross Margin	n/a [n/a]	n/a [n/a]	n/a [n/a]	27% (Q2'26) [8-K guid]	22.3% [Mkt 17-Oct-26]
Op Margin	n/a [n/a]	n/a [n/a]	n/a [n/a]	n/a [n/a]	-12.6% [Mkt 17-Oct-26]

Valuation

Absolute (4/10)

EV/Revenue (TTM) 14.7x [Cons]
DCF Base $5.12 [Cons]
P/E (fwd) 77x [Mkt 17-Oct-26]

DCF implies 34% downside. A 77x forward P/E and 14.7x revenue for a pre-profit company prices in near-perfect execution.

Versus Peers (4/8)

Battery-material peers trade at high revenue multiples pre-scale [Peers 17-Oct-26]

AMPX is not an outlier vs speculative battery peers, but the peer group itself is expensive; defense-contracted revenue earns only a partial premium.

Versus History (3/7)

52-week range $6.68 - $24.23 [Mkt 17-Oct-26]

Trading 68% below its highs, but multiples are still rich relative to the company's own trading history given it remains loss-making.

Catalyst Timeline

Nov 2026 [Cons]
Q3 2026 Earnings (Two-Sided): Must show H2 delivery against the $140M guide; a beat would validate the EBITDA breakeven story.

Q4 2026 [8-K guid]
SiCore 500 Commercial Availability (Positive): 500 Wh/kg cell on conventional lines; de-risks the industrialization question.

2026-2027 [8-K]
DoW Grant Milestones (Two-Sided): Up to $75M OTA, but majority is unfunded and tied to

Top Risk Factors (Item 1A)

1. Grant Funding Risk: A majority of the $75M award is unfunded and depends on future appropriations, with payments tied to government-accepted milestones. Delivery delays or funding gaps would stall the 12M-cells-per-year plan. [8-K]

2. Cash Runway: $74.5M in cash against a recent quarterly burn pace that has been lumpy. If the promised EBITDA breakeven slips, dilution is the likely backstop. [10-Q Q2 2026]

3. Volatility and Shorts: Beta of 2.35, short interest near 17-19% of float, and the stock trading 68%

> appropriations; accepted deliverables unlock payments.

What Would Change Our Score

A Q3 2026 beat with clean cash conversion would lift Forward Growth and Trend and could justify the current multiple. A miss on H2 delivery or DoW milestone delays would confirm the valuation call and likely drive the stock toward the $5.12 base.

below its 52-week high. Any execution miss gets punished hard. [Mkt 17-Oct-26]

Forward Growth Drivers

- Silicon-anode cells with up to 2x energy density of graphite, validated by defense and drone OEM demand [8-K guid]
- NDAA-compliant US supply chain via DoW IBAS grant and contract manufacturing partnerships [8-K guid]
- $600M revenue long-term target with 30%+ gross margin and 20% adjusted EBITDA margin by 2030 [8-K guid]

Missing / Modified Data Log

- Historical gross margin by year not in local dataset; used Q2 2026 reported 27% and TTM 22.3% from market data.
- ROIC not meaningful for a pre-profit company; used cash runway and burn trajectory instead.
- Consensus revenue estimate for TTM 2026 revenue multiple tagged [Cons].
