BLENDED TARGET

The valuation uses a multi-year discounted cash flow framework across three scenarios. Discount rates are market-implied and updated from live market inputs. The scenario matrix above states what each scenario assumes in growth and margin terms and what it produces: horizon revenue, enterprise value, equity value and the per-share target.

We judge a scenario by whether its growth and margin posture is supported by the filed record and the company's own guidance, and we disclose below how much of each scenario's value sits in the terminal year, because that share is where the valuation risk concentrates.

Terminal value share

We disclose how much of each scenario value sits in the terminal year. Terminal value is 82.6% of Base enterprise value (Bear 81.0%, Bull 83.1%). A high terminal share means the target rests primarily on the terminal-year economics in the scenario matrix rather than on the explicit forecast years, and we weigh it accordingly in the investment view.

Fair value across scenarios

Model fair value by year under each scenario, on the same paths the ticker page chart draws.

SCENARIO	2026	2027	2028	2029	2030	2031	2032
Bear	$182.76	$199.88	$217.83	$236.02	$253.50	$269.41	$282.68

Bull	$390.88	$427.44	$468.85	$511.72	$553.24	$590.14	$620.60

Methodology note. Our valuation framework discounts scenario cash flows at market-implied discount rates updated from live market inputs. The $289.25 headline target is the blended outcome of the Bear, Base and Bull scenarios in the matrix above.

The bear case

Customer Concentration

A handful of hyperscalers drive AI revenue; loss of share at any major customer would be material to the growth trajectory.

Execution Risk

The $70-90B FY2031 target requires flawless execution on custom silicon and optical transitions over five years.

Broadcom Competition

Broadcom is the entrenched custom ASIC leader with superior scale; Marvell is gaining share but faces a formidable incumbent.

The strengths

Operating Quality

Duopoly in optical DSPs with 60%+ gross margins on leading products. Fabless model, strong IP moat, switching costs in custom ASICs.

Recent Trend

Revenue growth accelerating: 22% to 28% to 37% YoY. Margins expanding to 36.6%. Data center at 79% of mix. Textbook inflection.

Forward Growth

$12B to $20B to $70-90B guidance is unprecedented. 21 analysts raised targets. Design wins are confirmed, not speculative.

Valuation

Market implies 41% CAGR vs our 46% base case and 55-60% company target. DCF base $291.68 implies +28% upside. Market underprices the plan.

Cascadia scorecard

Composite score 81: Highly Attractive. Confidence High, as of 23-Oct-2026.

Investment view

A Q3 FY27 miss on the $3.15B guide would cut Forward Growth and Trend. Conversely, custom ASIC share gains beyond expectations could push the bull case ($390.88) into play.

Investment view: Buy. The $289.25 blended target implies +27%, balancing the $182.76 / $291.68 / $390.88 Bear / Base / Bull outcomes.
