Investment Thesis

AI Foundry Monopoly. TSMC manufactures the silicon inside Nvidia's AI accelerators. HPC is now 68% of revenue. Advanced nodes (7nm and below) are 79% of wafer revenue, with 2nm ramping from 3% to 8% in one quarter [8-K Q3 2026]. Demand Exceeds Supply. CEO C.C. Demand Exceeds Supply. CEO C.C. Wei: AI demand still exceeds TSMC's supply capability. Q4 guided to $52.3-54.3B vs $48.8B consensus. Sixth consecutive record profit quarter.

Stretched vs DCF. At $412.35, the ADR trades 76% above our $248.36 DCF base. The business is the best in semis; the price leaves no margin for geopolitical or cyclical error. All figures in NT$ unless noted.

The probability-blended target implies 39% downside

A 25% Bear / 50% Base / 25% Bull weighting implies -39% from the $412.35 reference price.

$250.12
BLENDED TARGET

The valuation uses a five-year detailed EBIT bridge (FY2026-2030): revenue to EBIT to cash taxes at 16%, plus D&A, less capex and working-capital investment to reach unlevered free cash flow. The discount rate is a live CAPM build with beta decaying from 1.37 to a 1.05 terminal beta (mature semiconductor peer), so the WACC path runs from 9.78% to a terminal WACC of 8.65%.

We reconcile the EBIT margin paths to the filed record explicitly, because they sit below what TSMC is currently reporting. Filed operating margin was about 50.7% for FY2025 and 59.3% for H1 2026, with quarterly prints of 60.3% and 58.7% in 2026, and management's guided band for the most recent quarter was 56% to 58%. Our paths (Bear 44% to 48%, Base 48% to 52%, Bull 50% to 56%) start below the latest filed full year and the Base terminal of 52% remains below every 2026 print and below the guided band; only the Bull terminal reaches the band's low end. The paths are a normalization-to-cycle assumption, not an extrapolation of the current leading-edge mix and pricing environment, and the 2026-10-22 forensic audit tested them against the filed history and the guided band on exactly that basis. The filed evidence contradicts the paths in the conservative direction only, so we retain them and state the defense here rather than raise the paths toward peak prints: if the current margin structure persists, it is upside to these targets, not an input to them.

What to monitor

Jan 2027. Q4 2026 Earnings: $52.3-54.3B guide (vs $48.8B Street). 2nm ramp is the watch item.

2027. 2nm volume ramp and Arizona fab expansion progress.

2026-2028. CapEx guided significantly above prior 3-year period to meet AI demand.

Agency risk score 52 of 100: balanced, typical corporate alignment

The score follows the website's Executive Alignment & Agency Risk model: insider ownership up to 40 points, open-market Form 4 flow over the trailing six months up to 30, and pay-for-performance up to 30. Insiders hold 0.01% of shares outstanding. Form 4 filings over the trailing six months show $24.4K of open-market purchases against $0 of sales, a net flow of $24.4K. One-year total shareholder return is +48.5% against CEO total pay of $63.45M (Dr. C. C. Wei Ph.D.), which the model scores as PERFORMANCE EARNED.

The bear case

Geopolitical Risk

Concentration of leading-edge fabs in Taiwan; any cross-strait escalation is existential for the equity.

Node Transition

2nm ramp diluted Q3 gross margin by 1.3 pts; yield issues at new nodes are the recurring execution risk.

Customer Concentration

Customer concentration (Apple, Nvidia) means any share shift or demand pause is material.

The strengths

Operating Quality

The world's leading foundry with no close second at the leading edge. 66% gross margins, 51% net margins, NT$2.77T cash, 0.19x debt/equity. Pricing power is structural.

Recent Trend

Sixth straight record quarter. Profit +68.7% YoY, revenue +50.9%. Q4 guide raised well above consensus. Demand exceeds supply per CEO.

Forward Growth

2nm ramping fast, Q4 guide implies +58% YoY, 2026-2028 capex stepped up materially. AI accelerator demand is the multi-year driver.

Valuation

At $412.35 vs $248.36 DCF base, the ADR is 76% above fair value, the premium behind our Hold, Valuation Concerns rating. PEG 0.8 is attractive on growth, but absolute price embeds flawless execution.

Cascadia scorecard

Composite score 76: Attractive. Confidence High, as of 17-Oct-2026.

Investment view

A 2nm yield problem or Taiwan escalation would cut all pillars. Sustained 40%+ growth into 2027 with margin recovery could support current levels.

Investment view: Hold, Valuation Concerns. The $250.12 blended target implies -39%, balancing the $204.62 / $248.36 / $299.12 Bear / Base / Bull outcomes.
