Investment Thesis

Only US HALEU Producer. Centrus runs the only NRC-licensed HALEU production in the US, backed by a $900M DOE award [Q2 PR]. Three of four advanced reactors reaching criticality ran on its fuel [Q2 call]. That is a genuine chokepoint in the SMR supply chain. Contracted Growth. $4.5B backlog through 2040 with definitive deals from X-energy, Radiant, and Antares Nuclear that include customer prepayments [8-Ks]. Demand is contracted; the job now is building the cascades to deliver it. Priced Above Our Corrected Base.

The latest print

Contracted Growth. $4.5B backlog through 2040 with definitive deals from X-energy, Radiant, and Antares Nuclear that include customer prepayments. Demand is contracted; the job now is building the cascades to deliver it.

Priced Above Our Corrected Base. At $104.15, the market implies an 11.5% revenue CAGR, just below our 12% base case. Our corrected base $79.71 implies 23% downside: we moderated the model's flat EBIT margins to the filed gross-margin record and anchored the share count to the September 2026 offering (24.4M diluted, including the pre-funded warrants), with the $490M of net offering proceeds in the cash bridge. The stock is down 53% YTD on dilution fears, not demand loss.

BLENDED TARGET

The valuation uses a multi-year unlevered free cash flow DCF. The discount rate is the live CAPM rate: the 10-year Treasury yield plus beta times the market-implied equity risk premium. Terminal value is a Gordon perpetuity on terminal-year free cash flow.

Mechanics are explicit. The bridge runs revenue to EBIT to cash taxes, then adds back D&A and subtracts capex and working-capital investment to reach unlevered free cash flow. Targets are divided by diluted shares outstanding.

Terminal value share and terminal WACC

We disclose how much of each scenario value sits in the terminal year. Terminal value is 137.4% of Base enterprise value (Bear 708.9%, Bull 108.8%). The terminal WACC is 8.30% in Base (Bear 8.30%, Bull 8.30%), on a terminal beta of N/A (Bear N/A, Bull N/A).

Fair value across scenarios

Model fair value by year under each scenario, on the same paths the ticker page chart draws.

Agency risk score 20 of 100: high agency risk, the value-trap profile

The score follows the website's Executive Alignment & Agency Risk model: insider ownership up to 40 points, open-market Form 4 flow over the trailing six months up to 30, and pay-for-performance up to 30. Insiders hold 1.03% of shares outstanding. Form 4 filings over the trailing six months show $0 of open-market purchases against $62.3K of sales, a net flow of -$62.3K. One-year total shareholder return is -68.4% against CEO total pay of $1.90M (Mr. Amir V. Vexler), which the model scores as SUB-OPTIMAL ALIGNMENT.

SEC proxy audit, DEF 14A filed 2026-04-24

Alignment grade A. TOTAL PAY DECLINE (-38.7%). Amir V. Vexler, fiscal 2025 vs fiscal 2024; total compensation change year on year: -38.7%.

BASE SALARY	STOCK AWARDS	NON-EQUITY INCENTIVE	OTHER COMPENSATION
$810,000	$269,996	$980,100	$114,261

CEO reported compensation dropped 38.7% primarily because 2024 included a sizable sign-on equity grant of 20,000 RSUs alongside lower annual incentive payouts in 2025. Meanwhile, Centrus demonstrated explosive TSR performance (increasing from 288 to 1,050 on a $100 basis), driving Compensation Actually Paid up to $6.87M. Compensation shows disciplined grant-date discipline with high equity leverage tightly aligned to shareholder value creation.

Proxy audit source: SEC EDGAR DEF 14A, audited 2026-10-18 by the weekly proxy pipeline. Filing: https://www.sec.gov/Archives/edgar/data/1065059/000162828026027241/leu-20260424.htm

Methodology. This module reuses the website's Executive Alignment & Agency Risk model unchanged. Scores of 75 and above band as founder-mode, high conviction; 45 to 74 as balanced, typical corporate; below 45 as high agency risk. Inputs are the same feeds behind the site model (Yahoo Finance insider holdings, Form 4 transactions and executive compensation) plus the SEC DEF 14A CD&A audit from the weekly proxy pipeline. Computed 22 October 2026 for this note.

The bear case

Dilution and Capital Intensity

~$500M equity and warrant offering in September 2026 diluted holders; FY2026 capex guide of $350-500M and negative model FCF through 2027 mean more funding needs are possible.

Government Funding Dependence

The HALEU cascade work is government-funded; DOE chose not to extend the existing cascade contract. Awards and prepayments depend on federal budgets and policy priorities.

Contingent Backlog

About $3.0B of the $4.5B backlog is contingent LEU and HALEU sales tied to the Piketon expansion ($2.4B definitized). Delays in the build-out push contracted revenue further out.

Lumpy Revenue

Q1 2026 revenue was $76.7M vs Q2 at $176.1M. Shipment timing drives big swings, so any single quarter can miss badly and earnings are hard to model.

The strengths

Operating Quality

Genuine chokepoint asset: the only NRC-licensed US HALEU producer with a $900M DOE award. But economics are lumpy and thin: quarterly revenue swings 2x between quarters, net margins 10-17%, FCF margins single digits, and heavy capex ahead. Our DCF carries flat EBIT margins of 15% (Bear), 20% (Base) and 25% (Bull), moderated from 31.6%/36.4%/41.7% after the October 2026 forensic audit showed the prior levels above the filed gross margin on the current mix (FY2025 gross margin 26.2%, Q2 2026 28.3%). At the filed operating-expense ratio of about 15% of revenue, the moderated margins imply gross margins of about 30%/35%/40% — inside the filed record in every scenario (FY2023 35.0%, FY2022 peak 40.1%).

Recent Trend

Stock down 53% YTD and 70% over 1 year, below the 200-day average (Strong Sell on daily MAs). Q2 beat on revenue and adj EPS but the stock fell on the $500M equity raise. Revenue growth is real but buried under dilution.

Forward Growth

$4.5B backlog through 2040, DOE awards, and prepayment-funded HALEU deals give visible demand. But $3.0B of backlog is contingent on the Piketon expansion, and analyst estimates see revenue roughly flat through 2029. Growth is contracted, not yet delivered.

Valuation

DCF base $79.71 implies 23% downside from $104.15 on the corrected model; the market prices an 11.5% CAGR, just under our 12% base case. But 29x TTM P/E is not cheap for lumpy government-dependent earnings, and dilution risk lingers.

Cascadia scorecard

Composite score 55: Fair. Confidence Medium, as of 17-Oct-2026.

Catalysts & Risk	Q3 earnings Nov 4 and the year-end Oak Ridge centrifuge milestone are near-term positives. HALEU prepayments fund the build without debt. Offset: dilution overhang from the September raise, DOE funding dependence, and contingent-backlog execution risk. Balanced, slightly positive.	62

Investment view

Q3 earnings on Nov 4 and the year-end Oak Ridge centrifuge completion are the near-term swing factors. A funded, on-schedule HALEU ramp would push toward the bull case ($116.73); further equity raises or DOE funding cuts would test the bear ($51.11).

Investment view: Hold, Valuation Concerns. The $81.81 blended target implies -21%, balancing the $51.11 / $79.71 / $116.73 Bear / Base / Bull outcomes.
