The valuation uses a multi-year unlevered free cash flow DCF. The discount rate is the live CAPM rate: the 10-year Treasury yield plus beta times the market-implied equity risk premium. Terminal value is a Gordon perpetuity on terminal-year free cash flow.

Mechanics are explicit. The bridge runs revenue to EBIT to cash taxes, then adds back D&A and subtracts capex and working-capital investment to reach unlevered free cash flow. Targets are divided by diluted shares outstanding.

What to monitor

29-Oct-2026. Q3 2026 Earnings (Two-Sided): guidance is $15.8-16.8B revenue and $0.38 non-GAAP EPS. A test of the re-acceleration thesis.

H2 2026. 14A Customer Decisions (Positive): CFO claims conviction on landing external 14A customers, but none are named yet. Firm decisions are expected now.

2027-2028. EMIB-T Packaging Ramps (Two-Sided): reported Google/Amazon/Meta orders worth several billion dollars per customer; TSMC now publicly offers fallback capacity.

Agency risk score 91 of 100: founder-mode alignment, high conviction

The score follows the website's Executive Alignment & Agency Risk model: insider ownership up to 40 points, open-market Form 4 flow over the trailing six months up to 30, and pay-for-performance up to 30. Insiders hold 13.99% of shares outstanding. Form 4 filings over the trailing six months show $10.00M of open-market purchases against $6.49M of sales, a net flow of $3.51M. One-year total shareholder return is +140.5% against CEO total pay of $3.83M (Mr. Lip-Bu Tan), which the model scores as PERFORMANCE EARNED.

Intel initiated a major leadership overhaul in early 2025 by appointing Lip-Bu Tan as CEO to lead a multiyear reinvention focused on manufacturing execution and operational discipline. The excerpt establishes the transition framework and CD&A outline but omits the Summary Compensation Table figures from page 62. Quantitative alignment and incentive payout percentages cannot be determined directly from the provided introductory and governance text.

Methodology. This module reuses the website's Executive Alignment & Agency Risk model unchanged. Scores of 75 and above band as founder-mode, high conviction; 45 to 74 as balanced, typical corporate; below 45 as high agency risk. Inputs are the same feeds behind the site model (Yahoo Finance insider holdings, Form 4 transactions and executive compensation) plus the SEC DEF 14A CD&A audit from the weekly proxy pipeline. Computed 21 October 2026 for this note.

CASCADIA ANALYTICS

The bear case

Foundry Execution

External foundry revenue was only $293M of ~$5.8B in Q2; Intel has warned it may exit manufacturing if it cannot attract outside customers.

Competitive Pressure

TSMC's 2nm process, AMD's EPYC outpacing Xeon 6, and Nvidia's near-monopoly in AI accelerators leave Gaudi with a structural ecosystem disadvantage.

Capital Intensity

FY25 free cash flow was -$4.9B with $46.6B of debt and a suspended dividend; the heavy capex program must be funded while the foundry loses money.

The strengths

Operating Quality

An integrated device manufacturer with massive scale and gross margin recovering from 27.5% to 40.4% in a year. But the foundry still loses $2B+ a quarter, free cash flow was -$4.9B in FY25, and the dividend is suspended. A turnaround in pr

Recent Trend

Revenue growth re-accelerated from 7% to 25.4% YoY, EPS beats are stacking (Q2 non-GAAP $0.42 vs $0.21 est), and the stock is up 200%+ in 2026. But it sits 20% off its high and fell 5.8% on Oct 16 when TSMC courted Intel's packaging custome

Forward Growth

Forward growth rests on foundry wins that are not signed yet: 14A customer decisions are due now, the EMIB-T packaging book is reported but unconfirmed, and consensus sees FY26 EPS of just $1.04. Genuine optionality, but speculative.

Valuation

At $89.85 the market prices a 28% FCF CAGR, which our reverse DCF labels euphoric. DCF base $34.27 means 62% downside on fundamentals; NTM P/E is 42.7x. You are paying for the foundry win twice over.

Cascadia scorecard

Composite score 51: Fair. Confidence Medium, as of 17-Oct-2026.

CASCADIA ANALYTICS

PILLAR	RATIONALE	SCORE
Operating Quality	An integrated device manufacturer with massive scale and gross margin recovering from 27.5% to 40.4% in a year. But the foundry still loses $2B+ a quarter, free cash flow was -$4.9B in FY25, and the dividend is suspended. A turnaround in progress, not a quality compounder yet.	55
Recent Trend	Revenue growth re-accelerated from 7% to 25.4% YoY, EPS beats are stacking (Q2 non-GAAP $0.42 vs $0.21 est), and the stock is up 200%+ in 2026. But it sits 20% off its high and fell 5.8% on Oct 16 when TSMC courted Intel's packaging customers.	78
Forward Growth	Forward growth rests on foundry wins that are not signed yet: 14A customer decisions are due now, the EMIB-T packaging book is reported but unconfirmed, and consensus sees FY26 EPS of just $1.04. Genuine optionality, but speculative.	55
Valuation	At $89.85 the market prices a 28% FCF CAGR, which our reverse DCF labels euphoric. DCF base $34.27 means 62% downside on fundamentals; NTM P/E is 42.7x. You are paying for the foundry win twice over.	22
Catalysts & Risk	Q3 earnings on Oct 29 and 14A customer decisions are near-term and two-sided. Nvidia's $5B stake and the US government backstop limit downside tails, but the Kiryat Gat explosion, TSMC's packaging poaching, and $46.6B of debt keep the risk bar high.	52

Investment view

A named external 14A customer, or a Q3 beat that converts reported packaging orders into booked revenue, would lift Forward Growth and Catalysts. Conversely, continued foundry losses with no external wins would cut Trend and Growth further, and the valuation pillar has little floor while the price sits 2.6x our base case.

Investment view: Hold. The $34.48 blended target implies -62%, balancing the $28.80 / $34.28 / $40.56 Bear / Base / Bull outcomes.
