The valuation uses a multi-year unlevered free cash flow DCF. The discount rate is the live CAPM rate: the 10-year Treasury yield plus beta times the market-implied equity risk premium. Terminal value is a Gordon perpetuity on terminal-year free cash flow.

Mechanics are explicit. The bridge runs revenue to EBIT to cash taxes, then adds back D&A and subtracts capex and working-capital investment to reach unlevered free cash flow. Targets are divided by diluted shares outstanding.

The bear case

Customer Concentration

A handful of hyperscalers drive AI revenue; loss of share at any major customer would be material to the growth trajectory.

Execution Risk

The $70-90B FY2031 target requires flawless execution on custom silicon and optical transitions over five years.

Broadcom Competition

Broadcom is the entrenched custom ASIC leader with superior scale; Marvell is gaining share but faces a formidable incumbent.

The strengths

Operating Quality

Duopoly in optical DSPs with 60%+ gross margins on leading products. Fabless model, strong IP moat, switching costs in custom ASICs.

Recent Trend

Revenue growth accelerating: 22% to 28% to 37% YoY. Margins expanding to 36.6%. Data center at 79% of mix. Textbook inflection.

Forward Growth

$12B to $20B to $70-90B guidance is unprecedented. 21 analysts raised targets. Design wins are confirmed, not speculative.

Valuation

Market implies 36% CAGR vs our 46% base case and 55-60% company target. DCF base $387 implies 70% upside. Market underprices the plan.

Investment view

A Q3 FY27 miss on the $3.15B guide would cut Forward Growth and Trend. Conversely, custom ASIC share gains beyond expectations could push the bull case ($507) into play.

Investment view: Buy. The $382.00 blended target implies +59%, balancing the $243.17 / $388.25 / $508.35 Bear / Base / Bull outcomes.
