BLENDED TARGET

The valuation uses a multi-year discounted cash flow framework across three scenarios. Discount rates are market-implied and updated from live market inputs. The scenario matrix above states what each scenario assumes in growth and margin terms and what it produces: horizon revenue, enterprise value, equity value and the per-share target.

We judge a scenario by whether its growth and margin posture is supported by the filed record and the company's own guidance, and we disclose below how much of each scenario's value sits in the terminal year, because that share is where the valuation risk concentrates.

Terminal value share

We disclose how much of each scenario value sits in the terminal year. Terminal value is 68.7% of Base enterprise value (Bear 73.1%, Bull 69.1%). A high terminal share means the target rests primarily on the terminal-year economics in the scenario matrix rather than on the explicit forecast years, and we weigh it accordingly in the investment view.

Fair value across scenarios

Model fair value by year under each scenario, on the same paths the ticker page chart draws.

SCENARIO	2026	2026	2027	2028	2029	2030
Bear	$15.45	$16.78	$23.79	$24.51	$25.09	$25.51

Competitive moat and concentration risk

We rate the moat as Narrow and we view the market structure as Oligopoly (OSAT). We assign a premium of +5% to sector median multiples on moat strength alone.

- scale and geographic footprint, $6.7bn 2025 revenue, 55+ years, advanced products >80% of Q4 2025 revenue, and a $2bn Arizona facility due 2028 (company/press coverage, 2025-2026).
- Gross margin expanded to 16.7% in Q4 2025 (reported Feb 2026) alongside a $30m strategic asset sale, margin expansion came with a one-off, not a price increase. No evidence of price-led margin expansion was found.
- The weakest element is no pricing power, Q4 2025 gross margin 16.7% and FY2025 net margin 5.6% (net income $373.9m on $6.7bn revenue), with top-10 customers at 72% of sales (Apple 29.8%, Qualcomm 11.1%). A 16.7% gross margin is a cost-competitor's margin, not a moat-pricing margin.

On a multiple cross-check, the justified range is 21.0-23.0x / 18.3-20.0x. The cross-check value is $27.63-$30.20, on a base of $1.51 median GAAP EPS, 2021-2025 (= FY2025 trailing). The gap verdict is COLLAPSES, not at all (below Base $34.42).

This figure uses the normalized base from the October 27 recheck, not the original boom-year base.

We have no disclosed backlog figure for this company, so backlog gives no support to the growth path here.

This material is for informational and discussion purposes only and is not investment advice or a recommendation to buy or sell any security. Forecasts and valuation outputs are inherently uncertain.

We score concentration and credit risk across seven families, where a High score is 8 points, a Medium score is 4 points, and a Low score is 1 point.

Risk family	Score
customer concentration	8 points
counterparty credit and funding dependence	1 points
single product, single program, or single platform dependency	4 points
single supplier, single fab, or single geography exposure	4 points
platform, channel, or distribution dependency	1 points
customer insourcing risk	8 points
regulatory single point risk	1 points

The combined discount is 20 percent, capped at 20 percent, against an uncapped total of 27 percent. Shown side by side with the moat premium or discount, the net stance is -15 pp points arithmetically. We do not net these figures into a new target, and we do not double count a family excluded under the double-count rule.

The ladder ranks risk coarsely, and because 32 of the 47 names reach the 20 percent cap, the combined discount is not a mechanical valuation haircut until the ladder is recalibrated.

On the gap to spot, the concentration assessment reads as follows. Not at all

Both the moat premium or discount and the concentration discount are multiple and risk cross-checks dated October 27, 2026, and neither figure is in the DCF target itself. Cross-check figures were computed against the Base in the October 27 framework, so they may differ from a live Base that has since moved.

Methodology note. Our valuation framework discounts scenario cash flows at market-implied discount rates updated from live market inputs. The $37.46 headline target is the blended outcome of the Bear, Base and Bull scenarios in the matrix above.

The bear case

Beat-and-Drop Pattern

The stock fell 24.7% the day after the Q2 beat and 5.6% after Q1's. Expectations and positioning matter more than the print itself.

Cyclical, Capital-Intensive

OSAT is a low-margin toll road with heavy capex requirements. A smartphone or memory downturn would hit utilization and margins hard.

Customer Mix

Revenue concentrates in mobile and consumer end markets. AI packaging is growing but not yet large enough to carry a down cycle.

The strengths

Operating Quality

Scale leader among OSATs with a solid balance sheet (D/E 0.28, current ratio ~2.1) and a dividend. But it is a capital-intensive, cyclical toll road: 15.5% gross and 10.5% operating margins cap structural quality.

Recent Trend

Revenue bottomed at $6.32B in FY2024, now running at $7.46B TTM with +25.6% growth in Q2. Three straight earnings beats; net margins expanded from 3.6% to 9.15% YoY. The -38% six-month stock slide is the tempering factor.

Forward Growth

Q3 guide of $0.72-0.82 EPS and consensus FY EPS of $2.60 (+73%) confirm the recovery. AI advanced packaging and US onshore capacity are real levers, though OSAT growth stays cyclical and capex-heavy.

Valuation

DCF base $34.87 implies ~11% upside from $39.24; the market-implied CAGR of about 9.1% sits between our 4% bear case and our 10% base case. Forward P/E of 14.9x and EV/revenue of 1.6x are cheap vs AI semi peers.

Cascadia scorecard

Forward Growth	Q3 guide of $0.72-0.82 EPS and consensus FY EPS of $2.60 (+73%) confirm the recovery. AI advanced packaging and US onshore capacity are real levers, though OSAT growth stays cyclical and capex-heavy.	68
Valuation	DCF base $34.87 implies ~11% upside from $39.24; the market-implied CAGR of about 9.1% sits between our 4% bear case and our 10% base case. Forward P/E of 14.9x and EV/revenue of 1.6x are cheap vs AI semi peers.	68
Catalysts & Risk	Q3 earnings on Oct 26 with $0.79 consensus (+55% YoY) is the near-term catalyst; analyst targets average $68.33 (+63%). But the post-beat selloffs, cyclicality and heavy capex keep the skew balanced rather than bullish.	62

Investment view

A Q3 beat with raised Q4 guidance would validate the +73% FY EPS consensus and likely close the gap to the $68.33 analyst target; a guide-down or another post-beat selloff would cut Trend and confirm the multiple compression.

Investment view: Hold. The $37.46 blended target implies -5%, balancing the $15.45 / $34.87 / $64.64 Bear / Base / Bull outcomes.
